

Git Puns!

Read through QA-Community > Git > GitHub Pull Requests.

In your teams, please select a **Product Owner**. They should make a Git repository entitled **GitPuns** on GitHub.

This repo will encompass all aspects of Git that we've covered. This includes:

- staging, committing, and pushing
- forking and cloning
- reverting and/or resetting commits
- a feature-branch model with **MAIN**, **DEV**, and **FEATURE-** branches
- Each team member should **fork** and **clone** their own version of this repo (**Product Owner won't have to fork it!**)
- Each team member must contribute at least **two** **FEATURE-** branches
- Each branch should contain a text file with an **awful** pun
- Pull Requests for merging your **FEATURE** branches to your **DEV** branches (your copy of the original repo!)
- Pull requests for merging your **DEV** branch into the **Product Owner's DEV** branch
- Pull request(s) for merging the **Product Owner's DEV** into the **Product Owner's MAIN**
- Setting your group members as **Collaborators**
